

ORkun Project

Admin sets up services, categories, prices, promotions, and payment rules

Vendors register and complete KYC verification

Approved vendors are assigned to eligible service categories

Customer browses services in the mini app

Customer selects a service, adds an address, and submits a booking

Vendor receives and accepts the booking request

Customer tracks the service status:

Waiting confirmation → Accepted → On the way → In progress → Completed

Customer and vendor can communicate during fulfilment

Platform records order and payment details

Admin monitors orders, reviews payments/refunds, resolves issues, and tracks activity

Orkun operates as a two-sided local-services marketplace. Customers book services through a mobile mini app, while verified vendors accept and fulfil requests. The platform provides real-time booking tracking and vendor communication. An admin dashboard manages vendor KYC, services, orders, payments, refunds, promotions, and operational controls to ensure service quality and marketplace reliability.

For Customers

Find the right service, make a booking in minutes, and stay informed at every step. From vendor confirmation to job completion, Orkun gives you more clarity and control over your service request.

For Service Vendors

Orkun helps service providers connect with customers, receive booking requests, manage jobs, and grow their business through a reliable digital marketplace.

For Operations

Our admin platform supports vendor verification, service management, order monitoring, payments, refunds, promotions, and operational reporting—helping ensure a consistent and trustworthy marketplace experience.

Orkun Admin Web — Business Operations Platform

Orkun Admin Web is a centralized back-office platform for managing a service marketplace. It enables operations teams to oversee vendors, clients, services, orders, payments, promotions, and system settings from one responsive dashboard.

Key capabilities include:

- Dashboard analytics with date-based order and payment reporting
- Vendor management, including KYC reviews and service assignment
- Client profiles, addresses, cancellations, and support-related reviews
- Full order lifecycle management, payment review, refunds, and printable records
- Service catalogue, categories, attributes, recommendations, banners, and announcements
- Discounts, promo codes, tax/VAT, currencies, payment percentages, and app-version controls
- Role-based administration, audit logs, real-time admin notifications, and multilingual support

Built with Next.js, React, Material UI, Redux Toolkit, Axios, and charting tools; connected to a Laravel-based admin API.

Portfolio one-liner:

Designed and developed a scalable admin dashboard that streamlines daily marketplace operations—from vendor verification and order processing to financial controls, analytics, and auditability

Orkun Mini App Web — Customer Service Booking Platform

Orkun Mini App Web is a mobile-first customer application for discovering, booking, and tracking on-demand services. It delivers a streamlined marketplace experience inside a host mobile environment.

Key capabilities include:

- Browse promotional banners, service categories, top services, and service details
- Search services and save favourites for quick access
- Create bookings with service options, quantities, personal details, and address selection
- Manage saved addresses with map and current-location support

- Track active bookings through real-time order-progress updates
- View booking history, payment totals, status, and detailed service information
- Receive notifications and contact vendors during an active order
- Support embedded app controls through a web-to-native bridge, including location, navigation, and close actions

Built with React, TypeScript, React Router, Tailwind CSS, Webpack, Pusher, and REST API integration.

Portfolio one-liner:

Built a mobile-first service-booking mini app that lets customers discover local services, place bookings, manage addresses, and follow every stage of an order in real time

[Orkun Landing Web — Service Marketplace Marketing Website](#)

Orkun Landing Web is the public-facing website for Orkun, a Cambodia-based home-service marketplace that connects customers with trusted local service providers.

The site introduces the platform's value proposition, explains how customers can find and book services, and drives mobile-app downloads through Apple App Store and Google Play links.

Key highlights include:

- Clear product overview for finding and comparing local service providers
- Service categories such as cleaning, repairs, moving, air-conditioner servicing, and photography
- Feature explanations covering scheduled bookings, certified vendors, direct communication, secure deposits, real-time updates, and customer support
- App screenshots, feature showcases, and download calls to action
- Company mission and vision, privacy policy, terms and conditions, and contact information
- Search-engine and social-sharing metadata, sitemap, and responsive design

Built as a lightweight static website using HTML, CSS, Bootstrap, JavaScript, jQuery, Swiper, and Font Awesome.

Portfolio one-liner:

Created a responsive product-marketing website for a home-service marketplace, communicating the platform's benefits, building customer trust, and converting visitors into mobile-app users

Led the product direction for BusinessFlow (Orkun), a digital service marketplace that connects customers with verified local service providers. The product ecosystem supports the full service journey: customer acquisition, service discovery, booking, vendor operations, payment management, and internal administration.

The platform consists of three connected products:

- **Customer Mini App:** A mobile-first experience for browsing services, searching providers, managing addresses, creating bookings, making payments, receiving notifications, saving favourites, and tracking order progress.
- **Admin Web:** An operations platform for managing vendors, KYC verification, clients, services, categories, bookings, payments, refunds, promotions, reviews, analytics, audit logs, and system configurations.
- **Landing Website:** A marketing and acquisition channel that communicates the marketplace's value, explains customer trust features, and drives iOS and Android app downloads.

As Product Manager, focused on transforming home-service booking into a clear and trustworthy digital workflow. Key responsibilities included defining the product vision and roadmap, translating business needs into user stories and requirements, prioritizing features across customer and operations teams, aligning stakeholders, and improving the end-to-end booking experience.

Key product outcomes and areas of ownership:

- Designed the end-to-end service marketplace workflow: discovery → booking → vendor fulfilment → payment → review
- Improved customer trust through verified vendors, transparent booking status, secure deposits, and support touchpoints
- Enabled operational scalability with vendor KYC, service management, finance controls, promotions, reporting, and audit logs
- Established visibility into platform performance through dashboards for orders, payments, vendor activity, and service operations
- Supported local-market growth with multilingual capability, location-aware service discovery, and mobile-first access

Portfolio statement:

Product Manager for BusinessFlow / Orkun, an end-to-end home-service marketplace platform. Led product strategy and delivery across customer, admin, and marketing experiences to make finding, booking, managing, and fulfilling local services simpler, safer, and more scalable.

BusinessFlow / Orkun — Product Owner Portfolio Summary

Worked as Product Owner for BusinessFlow / Orkun, an end-to-end home-service marketplace connecting customers with verified local service providers.

Owned and prioritized requirements across three connected products:

- **Customer Mini App:** Service discovery, search, favourites, address management, booking, payments, notifications, and real-time order tracking.
- **Admin Web:** Vendor onboarding and KYC, client management, service catalogue, order processing, payment and refund handling, promotions, reviews, reporting, and audit logs.
- **Landing Website:** Product messaging, trust-building content, feature education, and mobile-app download conversion.

Key Product Owner responsibilities:

- Defined product requirements, user stories, acceptance criteria, and feature priorities
- Managed the product backlog and aligned delivery with business goals
- Worked with design, engineering, operations, and stakeholders throughout delivery
- Improved the customer journey from service discovery through booking, fulfilment, payment, and review
- Enabled operations teams to manage vendors, services, orders, and financial workflows efficiently
- Validated delivered features against business needs and user experience expectations

Portfolio statement:

As Product Owner for BusinessFlow / Orkun, I owned the backlog and delivery of a service-marketplace ecosystem across customer, admin, and marketing platforms—turning business goals into usable features that improved booking, vendor operations, payments, and platform growth.

BusinessFlow / Orkun — Frontend Developer Portfolio Summary

Worked as a Frontend Developer for BusinessFlow / Orkun, a home-service marketplace platform connecting customers with local service providers.

Developed and maintained three key web products:

- **Customer Mini App:** A mobile-first app for browsing services, searching, booking, managing addresses, viewing favourites, receiving notifications, and tracking order progress.
- **Admin Web Dashboard:** An internal operations system for managing vendors, KYC verification, customers, services, orders, payments, refunds, discounts, reporting, and audit logs.

- **Landing Website:** A responsive marketing website presenting Orkun's services, platform features, trust benefits, and mobile-app download links.

Key contributions:

- Built reusable, responsive UI components and user flows
- Integrated REST APIs for services, bookings, payments, profiles, and dashboard data
- Implemented real-time notifications and booking-status updates
- Developed filtering, tables, forms, modal dialogs, data visualizations, and export-related interfaces
- Created mobile-friendly service discovery and booking experiences
- Supported multilingual interfaces and location/address selection flows
- Collaborated with product, backend, and design teams to convert requirements into production-ready features

Portfolio statement:

Frontend Developer for BusinessFlow / Orkun, delivering responsive customer, operations, and marketing interfaces for a complete home-service marketplace using React, Next.js, TypeScript, Redux, Material UI, Tailwind CSS, and REST API
