

UMPay Admin Web V2 is a secure, role-based operations portal for managing the UMPay digital wallet and payment ecosystem.

It enables internal teams to monitor business performance through a real-time dashboard, manage users and merchants, review KYC verification, oversee balances and transaction activity, configure payment channels and exchange rates, and handle gateway orders. The platform also supports financial reporting, exports, promotional tools, vouchers, agent management, banners, card settings, and operational appeal handling.

Key highlights:

- Analytics dashboard for member growth, transaction volume, balances, online activity, and top currencies
- User and merchant administration with detailed profiles, payment accounts, verification, balances, and histories
- Payment operations for deposits, withdrawals, payment methods, gateway orders, and callback tracking
- Finance tools for transaction-fee reporting and Excel/PDF exports
- Secure administration through role-based permissions, JWT authentication, Google 2FA, reCAPTCHA, and activity controls
- Multilingual interface supporting English, Thai, Chinese, Japanese, and Malay

Tech stack: Vue.js 2, Vue Router, Vuex, Element UI, Axios, ApexCharts, Vue I18n, and Laravel 8 REST APIs.

UMPay Payment Gateway Web is a customer-facing checkout portal that lets customers complete payments through the UMPay mobile wallet.

When a merchant creates an order, the page securely retrieves the transaction details and presents a QR code or mobile deep link. Customers can scan the code or open UMPay directly on mobile to pay. The interface shows the order amount, currency, merchant, product, purchase-order number, and payment expiry countdown.

Key features:

- QR-code checkout and mobile-app deep linking
- Live payment-status updates using Pusher
- Payment success, failure, expired, and service-unavailable states
- Detailed digital receipt with invoice/reference information
- Merchant redirect after payment completion
- Receipt download as an image and social-sharing options

- Responsive design for desktop and mobile

Tech stack: React 18, TypeScript, React Router, Tailwind CSS, QRCode React, Pusher, Webpack, and internal API/i18n packages.

UMPay Web is the customer-facing web application for the UMPay digital wallet. It enables users to manage funds, make payments, transfer money, and access wallet services from a responsive browser-based interface.

Key features:

- Secure account access, registration, password recovery, PIN setup, and two-factor authentication
- Wallet management with balances, transaction records, bills, and real-time notifications
- Deposit and withdrawal flows with payment-method selection, fees, status tracking, and receipts
- Wallet-to-wallet transfers, bank transfers, UnionPay transfers, and Alipay transfers
- QR-code payment generation and scanning
- Currency exchange, exchange-rate history, and multi-currency wallet support
- KYC identity verification and membership-based feature access
- UMPay card services, including card requests, PIN changes, statements, and templates
- Voucher generation/redemption, payment-account settings, customer service, and multilingual support

Tech stack: React 18, TypeScript, React Router, Tailwind CSS, Pusher for real-time updates, QR-code/scanning libraries, Recharts, Webpack, and internal REST API/i18n/UI packages.

UMPay Landing Web is the public marketing website for the UMPay digital wallet platform. It introduces the product, explains core financial services, and guides visitors to register or download the mobile app.

The site communicates UMPay's wallet capabilities through responsive product pages, visual walkthroughs, video tutorials, FAQs, and regional information. It covers deposits, withdrawals, money transfers, and buy/sell services, while also providing transparent access to terms, privacy, and AML policies.

Key features:

- Product-focused homepage with wallet, payment, security, and transaction-management highlights
- Dedicated feature pages for deposits, withdrawals, transfers, and buying/selling
- Registration guidance and app-download calls to action

- Video tutorials, FAQs, social links, and customer-support access
- Country and currency availability information
- Multilingual experience in English, Thai, and Chinese
- Localized legal content, including Terms & Conditions, Privacy Policy, and AML policies
- Responsive UI optimized for desktop and mobile visitors

Tech stack: React 18, TypeScript, React Router, Tailwind CSS, Webpack, and internal UI, API, and internationalization packages.

Product Owner — UMPay Digital Payment Platform

Led product delivery for UMPay’s digital-payment ecosystem, spanning the customer wallet web app, merchant payment gateway, operations admin portal, and public landing website.

Owned the product roadmap and translated business, compliance, and operational needs into clear user stories and requirements for cross-functional engineering, design, QA, and business teams. Defined and prioritized end-to-end payment journeys including onboarding, KYC, wallet management, deposits, withdrawals, transfers, QR payments, payment-gateway checkout, cards, vouchers, and currency exchange.

Key responsibilities:

- Prioritized product backlog and release scope across customer, merchant, and admin platforms
- Designed and refined user flows for secure payment and wallet experiences
- Coordinated stakeholders to align business goals, operational workflows, and technical delivery
- Defined role-based admin capabilities for user management, transaction monitoring, KYC review, merchant operations, payment-channel configuration, and financial reporting
- Supported security and compliance requirements, including two-factor authentication, permissions, transaction tracking, AML, and privacy policies
- Validated features through acceptance criteria, UAT, feedback analysis, and iterative improvements
- Helped deliver multilingual experiences for English, Thai, Chinese, Japanese, and Malay users

Impact: Delivered a connected payment ecosystem that supports customer self-service, merchant checkout, real-time payment status, and efficient internal operations from a single product suite.

Product Manager — UMPay Digital Payment Platform

Managed the product strategy and delivery for UMPay's digital-payment ecosystem, including the customer wallet web app, payment gateway checkout, admin operations portal, and public landing website.

Defined the product roadmap and prioritized features that improved customer payments, merchant acceptance, and internal operational efficiency. Partnered with engineering, design, QA, compliance, and business stakeholders to turn market and user needs into requirements, user stories, release plans, and measurable product outcomes.

Key responsibilities:

- Owned roadmap planning and feature prioritization across customer, merchant, and admin products
- Led end-to-end payment journeys: onboarding, KYC, wallet management, deposits, withdrawals, transfers, QR payments, gateway checkout, vouchers, cards, and currency exchange
- Improved operational workflows for transaction monitoring, user verification, merchant management, payment-channel configuration, and financial reporting
- Defined product requirements, acceptance criteria, and success metrics; supported UAT and release validation
- Ensured products addressed security, permissions, 2FA, AML, privacy, and multilingual needs
- Coordinated cross-functional teams to deliver scalable, user-friendly financial products

Product outcome: Helped deliver an integrated platform that enables customers to manage digital-wallet services, merchants to accept payments, and operations teams to manage the payment ecosystem efficiently.

Frontend Developer — UMPay Digital Payment Platform

Developed responsive web applications for the UMPay digital-payment ecosystem, including the customer wallet, payment gateway checkout, operations admin portal, and public landing website.

Built user-friendly interfaces for wallet management, deposits, withdrawals, transfers, QR payments, payment status tracking, KYC, transaction history, merchant operations, and financial reporting. Worked closely with product, backend, design, and QA teams to translate requirements into reliable and scalable frontend experiences.

Key contributions:

- Built customer-facing wallet features for payments, transfers, deposits, withdrawals, vouchers, cards, and currency exchange
- Developed QR-code payment checkout with mobile deep links, payment countdowns, live status updates, receipts, and merchant redirects
- Created admin interfaces for user and merchant management, KYC reviews, payment channels, exchange rates, dashboard analytics, and reports
- Developed a multilingual public landing website with product pages, tutorials, FAQs, legal policies, and app-download journeys
- Implemented responsive, reusable UI components and consistent navigation flows
- Integrated REST APIs, authentication, role-based access, real-time Pusher events, and multilingual content

Tech stack: React, TypeScript, Vue.js, Vuex, React Router, Vue Router, Tailwind CSS, Element UI, Axios, Pusher, ApexCharts/Recharts, Webpack, and REST APIs.
